SEEDS OF FREEDOM
Epistemology

Nils Föge

Version 1.2
2026

Reality

1. In immediacy, reality reveals itself as naked awareness - self-shining, boundless and unchangeable.
2. Empirical reality (What-is) is the dynamic expression (modification) of awareness.
3. Secondary reality is the field of interpretation overlaying What-is.
4. Within it appear both cultural and personal perceptual distortions.
5. Cult-ure is a consensus-based dream woven from institutionalized belief systems.
6. Within the personal dream, perception is shaped by language, identification, bias and unconscious beliefs, constructing its own version of reality.

Knowledge and Belief

7. Knowledge is justified true belief.
8. Belief is an accepted idea whose justification or truth may be uncertain.
9. Every belief is justified by a net of beliefs.
10. The sources of justification are experience, inference, testimony and revelation.
11. The more of these coincide the closer the belief is to truth.
12. Every justification is based on a subjective feeling - the mind's marker of conviction.
13. That feeling is colored by bias and emotional involvement.
14. Only unmediated awareness, prior to conceptualization, carries the authority of truth.
15. Interpretation arises through belief networks, either illuminating or distorting immediacy.

Gnosis

16. Gnosis is embodied realization beyond knowledge.
17. It dawns when the world is no longer observed but experienced as a subject.
18. To think one has found the truth is an epistemological error.
19. Relative truth is an ever-flowing river; the moment it is defined, the current freezes.
20. The discerning one is concerned with the knowable only, while resting in mystery.

Field of Knowledge

21. The totality of all human knowledge is a holistic field.
22. It has contact with What-is at the periphery only.
23. The content of the field is a symbolic approximation that points to What-is.
24. Its purpose is mythology, agency and certainty.
25. A closed mind rationalizes conflicting data away to preserve the integrity of the field.

Paradigms

26. A paradigm is a lens on What-is.
27. It determines how one interprets experience and what is conceivable.
28. Depending on the circumstances every perspective is valid, invalid, both and neither.
29. The state of one's nervous system colors one's perception.

30. Perceptual fluidity arises when the nervous system is well regulated, safeguarding against tunnel vision.
31. Holding two opposing views at the same time leads to perceptual integrity.

Functional Knowledge

32. Metaprogramming is the playful and temporary use of belief systems.
33. From this fluidity, working models serve as a coherent description of What-is, held without emotional attachment or claim of truth.
34. Their purpose is to liberate and improve the skill of living.
35. The value of knowledge is measured by its service: “true” is that which is beautiful, simple and useful.

Illusion

36. Illusion is the experiential participation in a fragmented mode of awareness.
37. The landscape is entered by burning one’s maps - using illusions to destroy illusions.
38. Learning truths does not liberate the one still blinded by illusion
39. Once seen through, reality reveals itself through gnosis.

Self-Knowledge

40. Being is the end of all knowledge.
41. In knowing oneself as “I am”, the world is silently known.
42. This knowing is expressed through love alone.
